

MetricGuard

Scanned every team's metric definitions, matched them by **meaning** using embeddings, and flagged where the same business metric is computed differently — the silent reason dashboards disagree and executives stop trusting the numbers.

DataFinanceGrowthProduct

▲ Time window differs: ['30d_rolling', 'calendar_month', 'month']

▲ Filter logic differs across definitions

▲ Some definitions use COUNT(DISTINCT ...), others use COUNT(*)

Productactive_users

Distinct users with any event in the trailing 30 days.

```
SELECT COUNT(DISTINCT user_id) FROM events WHERE event_date ≥ CURRENT_DATE - INTERVAL '30 days'
```

Growth

MAU

Monthly active users: distinct users active in the current calendar month.

```
SELECT COUNT(DISTINCT user_id) FROM events WHERE DATE_TRUNC('month', event_date) = DATE_TRUNC('month', CURRENT_DATE)
```

Data

monthly_active_users

Users who logged in at least once in the last 30 days. Only counts login events.

```
SELECT COUNT(DISTINCT user_id) FROM events WHERE event_type = 'login' AND event_date ≥ CURRENT_DATE - INTERVAL '30 days'
```

Finance

churn_rate

Churn rate: share of subscriptions cancelled last month over total subscriptions. Uses subscription cancellation events instead of user-activity drop-off.

```
SELECT (COUNT(CASE WHEN cancelled THEN 1 END) * 1.0 / COUNT(*)) FROM subscriptions WHERE period = 'last_month'
```

Product

customer_churn

Churn rate: fraction of users who churned (became inactive) last month relative to all users active the prior month. Uses user-activity data, not subscription cancellations.

```
SELECT (COUNT(DISTINCT churned_user_id) * 1.0 / COUNT(DISTINCT user_id)) FROM user_activity WHERE month = 'last_month'
```

AGENT RECOMMENDATION · RAG-GROUNDED

MATCH 0.749

Churn Rate

[LLM fallback – no API key]

Based on the retrieved official definition, all teams should align to the governed glossary definition. Teams whose logic diverges (refund handling, time window, or filters) should migrate their SQL and dashboards to the canonical definition to restore trust in the numbers.

Sales

conversion_rate

Leads that converted to paying customers over all leads, all-time.

```
SELECT (COUNT(CASE WHEN converted THEN 1 END) * 1.0 / COUNT(*)) FROM leads
```

Marketing

conversion_rate

Share of website sessions in the last 7 days that ended in a purchase.

```
SELECT (COUNT(CASE WHEN purchased THEN 1 END) * 1.0 / COUNT(DISTINCT session_id)) FROM web_sessions WHERE date ≥ CURRENT_DATE - INTERVAL '7 days'
```

TRUST RISK

▲ Refund handling differs (some include refunds, some don't)

▲ Filter logic differs across definitions

Finance

monthly_revenue

Total revenue from completed orders, grouped by month. Excludes refunds and cancellations.

```
SELECT DATE_TRUNC('month', order_date) AS month, SUM(amount) AS revenue FROM orders WHERE
status = 'completed' GROUP BY 1
```

Sales

monthly_revenue

Revenue per month across all orders placed, including pending and refunded.

```
SELECT DATE_TRUNC('month', order_date) AS month, SUM(amount) AS revenue FROM orders GROUP BY
1
```

Marketing

revenue_monthly

Net monthly revenue after subtracting refunds, for completed and shipped orders.

```
SELECT DATE_TRUNC('month', order_date) AS month, SUM(amount - refund_amount) AS revenue FROM
orders WHERE status IN ('completed','shipped') GROUP BY 1
```
